PROJECT OVERVIEW

Dimensions

Footprint: 19’ x 8’
Ceiling: 6’-3”
Loft: 3’-8”
Bathroom: 8’ x 3’

Includes:
Main Room
Storage
Kitchenette
Eating Area
Bathroom
Bedroom

FLOOR PLAN
Main Area
Loft
DESIGN CONCEPT

The tiny house was built for a couple who will be able to utilizes the space to the maximum potential. The modern couple is looking for a design that specializes in bringing the outdoors inside, and this was done by having multiple uses of natural elements, such as, wood panels, marble countertops, and marble subway tiles. The design also included furniture that was made from reclaimed materials. Biophilic design was also utilized by having open windows throughout the space and plants to bring a feeling closer to nature. In terms of design, there were multiple built-in storage options for the couple. The bathroom is also a wet room to utilize the best amount of space.
