# Urban Style

Urban style reads modern + industrial.

Using materials like brick, concrete and stainless steel create a feeling that is textural and cool.

Bold colors and tones used sparingly and original artwork create an artistic and original vibe that add character.

# Urban Style

Modular furniture, open ductwork and open floor plans create an open and airy feeling that can be reconfigured when needed.

# Urban Style

Steel windows add lots of natural light to warm up the space while keeping it sleek and minimal.

# Incorporating Outdoor into Interior

Use natural materials and fibers, patterns

- Rugs, Baskets, Chairs, Flooring, Bedding,

Curtains

- Hemp, Jute, Rattan, Wood, Bamboo, Leather
- Decorate with shells, river rock, flowers, greenery

# Incorporating Outdoor into Interior

Lots of Natural Light

- Large Windows, Skylights,

screen Doors, Reflective Surfaces, sheer window

coverings

# Incorporating Outdoor into Interior

## Color

- Earthy tones, blues, greens, yellow and oranges

# Multipurpose Architectural

## 1. Multipurpose bench/ storage seating

<https://www.pinterest.com/pin/32088216074342820/>

This gives the tiny house some storage as well as seating on top giving the area more space.

# Multipurpose Architectural

## 2. Stairs/ Storage

Additional storage under the stairs allows the space to look more spacious and gives it a design element.

# Multipurpose Architectural

## 3. Art Decor/ Dining Table

using this allows a table to come down when needed to be used but can also go up to create more space while adding decoration to the wall.

<http://www.spicytec.com/2014/05/65-creative-furniture>

# Multipurpose Non-Architectural

This couch is perfect to be used in a tiny house because it works as a sofa and at the same time a side table. If extra seating is needed, it the table can be taken out and extra seating can be added.

<http://www.spicytec.com/2014/05/65-creative-furniture-ideas.html>

# Multipurpose Non-Architectural

This couch would work well in a tiny house that may not have enough room for a separate living room and bedroom. It can be made into a couch for during the day and at night can be folded to form a bed.

<http://www.spicytec.com/2014/05/65-creative-furniture-ideas.html>

# Multipurpose Non-Architectural

This is a great way to save space in a tiny house because this can act like a bench/ couch, a bed and even opens up to a table with chairs.

# Tiny House

Season 1 Episode 2

Profile of owner:

Name- Melanie

From: Los Angeles

-her job is sound healing -wants no mortgage

-she lives alone -low maintenance

-70,000 Budget

# Yurt

The tiny house they showed Melaine was a yurt. A yurt is a portable round tent. The yurt has insulation and drywall. It also has glass windows and bamboo floors. The whole yurt is 452 sq. ft.

# Living room and Kitchen

The whole house is rounded so there are no halls and everything is connected in one big room which makes this yurt different from other tiny houses. The whole space is used for multiple purposes (kitchen, dining, and living area all in one space).

# Bedroom

The kitchen and living area are all the same space however the bed is lofted. This was an efficient decision because they took advantage of the high ceilings giving more space for the kitchen and living area on the main level.

# Bathroom

The yurt only had one half bath but they were able to fit a decent size shower, a toilet, and small sink.

# Storage

The only storage space in the whole yurt is outside in a shed. The yurt has no closet space.
