

"Urban Dweller"

**Tiny
Home**

2015

Designed By: Moriah Crozier

Overview

- Tiny House Dimensions: 20' X 9' (exterior to exterior)
- Ceiling Height: 6'-3"
- Loft Height: 3'-8"
- Front Door: 2'-4" X 6'-0"
- Urban Chic Style combined with outdoor elements

The concept for my design of this Tiny Home was keeping with the idea of an open space while also creating a multi-purpose environment for a recent college graduate. This student's style was described as urban chic with an interest in the outdoors. The direction I took my design in, then, was simple and sleek with wood accents in as many places as possible. I also added brick veneer for the kitchen wall and a hanging potted plant to bring vegetation into the space. Since a multipurpose space was priority I made sure to add in some interesting and helpful features. The bed underneath a stage allowed for the space to feel so much more open, with high ceilings and a lot of natural light from the surrounding windows. I also made sure the table could be folded down or up to provide room for daily life as well as big enough to seat 2-4 individuals, allowing for welcome company. Lastly, I made sure to keep some sort of loft space for storage and/or extra seating and decided to use a sliding and detachable ladder for the client's benefit.

SIDE NOTES

- The ladder is moveable, as stated in the beginning
- The table folds down to create more space in the kitchen/bed area, but folds up and secures to fit four people comfortable around it
- Recessed lighting is used throughout the home to keep the space feeling open and less crowded
- The barn doors on the bathroom and front door are used to create a more outdoors type feel and the wood chosen for the doors, trim, cabinets, etc. throughout the home is used to create a warm atmosphere to an often cold space when it comes to an urban chic home style.
- I chose only four smaller windows for this home, because it allowed me to use more space for other things; also, when thinking about lighting, it's not always how *many* windows you have, but the *placement* of them, this is why I thought very carefully about the placement of my four windows
