

# Tiny House Project

---

Kendra and Kate

## Urban Style

This style highly emphasizes natural stones, wood features, and bronze accents. The open concept highlights distinct movement through the space with minimal interruptions. With a mixture of all natural tones and steel features, the use of the space flows well together.

# Outdoor Incorporations

To incorporate the outdoors, we would create a natural wood staircase with restored wood pieces. We will also include a feature wall that is textured with different sized stones. Lastly, we will provide a rough edge countertop that will be used to resemble the similarities of rocks and boulders. These familiar elements are among the few of the things that nature provides.

# Architectural Multipurpose Space

---

We would provide a staircase that would lead up to the lofted section of the tiny house. The under side of the stairs would be very useful for more storage space.

# Architectural Multipurpose Space

This large built-in provides many different uses.

Initially, it serves the use of a TV stand. It is also a confined closet space for both shoes and clothing. Finally, this unique piece implements a twin size bed that is slightly hidden, therefore it still appears as a decorative item.

# Architectural Multipurpose Space

Although in this picture, the table seems to be free-standing, we would like to create an architectural piece connected to the wall. The top section folds up when not in use while the wine coolers slide together to rest against the wall.

# Non-architectural Multipurpose Space

This particular piece serves many different functions. It can be used as a sectional seating area in more than one arrangement, dining table, as well as a twin sized bed for guests.

# Non-architectural Multipurpose Space

---

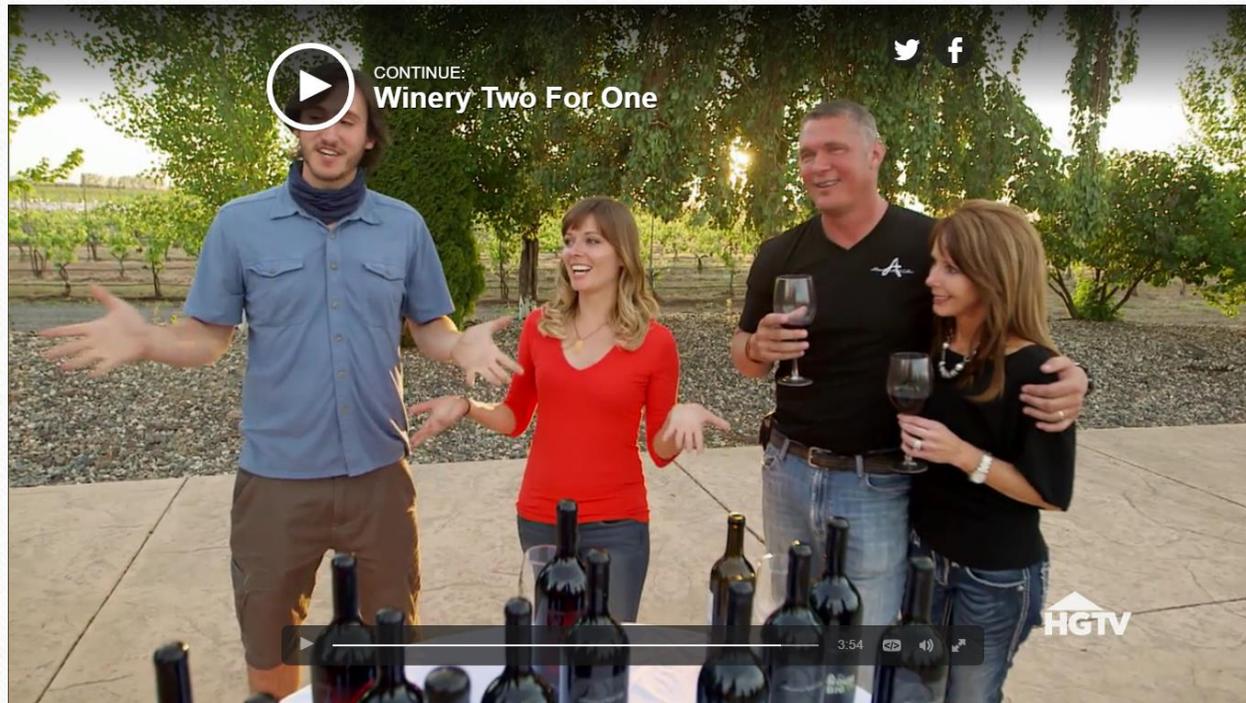

This unique piece of furniture provides two different uses. It can be taken apart to become a bench for additional seating that can become flush with the shelving unit when not needed for use.

# Non-architectural Multipurpose Space

To tend to our small fireplace within the tiny house, this piece of furniture can be used as additional seating as well as extra storage for wood.

# Tiny House Study

Winery owners, Jared and Allie Boyle have decided to construct tiny homes on their property for people to buy out and own. 2 teams of builders go head to head to each built a tiny home in 10 days for a couple looking to buy a property on the winery.

# Unique Design

This tiny house had many unique aspects about it. First of all it had wine on tap. This wine on tap is made out of a urinal. Another unique section of this house home had a murphy bed that was outside and underneath of this bed were two bathtubs (hottubs). The stove/oven was also taken from Allie and Jared's first travel trailer.

# Multipurpose Space Through Architectural Elements

---

One of the many multipurpose built-ins in this tiny house includes the drop down table. The wheel is attached to a chain which turns and lowers the table down. This becomes very convenient to put up when not in use to create more space in the tiny house. It is also a piece of art.

# Multipurpose Space Through Non-Architectural Elements

This bed is a non-architectural multipurpose design because it is a murphy bed that has two hot tubs hidden from view underneath of it. These hot tubs are facing the vineyard, providing the relaxation with a nice view as well.
